

Heroku Setup

Hunter Jorgensen

Setting up Heroku

Go to heroku.com

Sign up if you don't have an account

On the top right, click 'New' -> 'Create new app'

Name of the app: {first}-{last}-webdevspr2020-{assignment/project-number}

Setting Up Local Dev Environment

Create a new directory for your work: `mkdir webdev`

Go into that directory: `cd webdev`

Pull your github repo: `git pull`

`{github-repo-url-that-you-should-have-saved-from-earlier}`

Getting Your Code Live - Option 1 Pipeline

Go to your app in Heroku

Click on the 'Deploy' tab

Go to deployment method -> Github (Connect to Github)

You may need to login to Github, but use your repository name
{first}-{last}-{assignment-number}

Click 'Search', then Connect

Whenever you push you code to Github, Heroku should pick it up

Getting Your Code Live - Option 2 CLI

Download Heroku CLI - <https://devcenter.heroku.com/articles/heroku-cli>

(PC - download client; Mac - `brew tap heroku/brew && brew install heroku`)

Sign in to Heroku: `heroku login`

If you have normal Github.com account:

Set up remote Heroku branch: `heroku git:remote -a {your github repo}`

`git push heroku master`

If you have EE of Github:

`heroku create`

`heroku git:remote -v (in correct repo)`

`git push heroku master`
